Abstract of the Disclosure

A fence construction system and a method for building such a fence are provided. The fence looks like a wall and has wall characteristics, such as a post-tension condition, but is much less expensive and easier to build. A ratcheting system is used to tension the tensile wires which are then secured to the fence posts. A wire lath is applied to the tensile wires and coating material is then applied to the surface of the wire lath. After forming the fence construction, the tensile wires are released and the ratcheting posts are removed. The fence construction system can be used to build a fence portion of up to 300 feet long at one time.
